FEASIBILITY STUDY

(Submission Date: May 15, 2026)

This semester-long project challenges you to work collaboratively with your peers to identify a real-world issue and conduct an investigation in an attempt to analyse the problem and propose a solution. The project will culminate in a formal analytical report and a proposal presentation.

TASK DESCRIPTION

Select either a problem or an opportunity within your community, university, or country.

- If you choose a **problem**, clearly describe the issue and propose a practical solution to address it.
- If you choose an **opportunity**, clearly describe it and propose a practical strategy to capitalise on it.

Your proposed solution or strategy must be supported by relevant research.

You are then required to conduct a **feasibility study** of your proposed solution/strategy using the **TELOS model** to evaluate the following:

- **Technical feasibility** (Is the required technology available?)
- **Economic feasibility** (Is it cost-effective?)
- **Legal feasibility** (Does it comply with laws and regulations?)
- **Operational feasibility** (Can it function effectively in the given context?)
- **Scheduling feasibility** (Can it be implemented within a reasonable timeframe?)

Based on your analysis, you must determine whether your proposed solution or strategy is viable for implementation.
